

Set Up Instructions for Tennessee Oval Tent

dimensions 675 x 500 cm

(set up with several people if possible)

1. Lay out poles and check that all the parts are present.
2. Lay out canvas and loosely peg down with the roof guy ropes
3. Insert the 12 side poles and tension the guy ropes so the poles stay upright

4. From inside the tent with the entrances closed:

Construct and lay out the telescopic ridge pole and the centre poles.

Insert the centre pole top spikes into the ridge pole end eyelets.

Place the top spikes through the roof eyelets and partially raise the roof.

Adjust the telescopic ridge pole to the correct length (200cm), tighten and tie to the roof using the roof straps.

Raise the roof into position – slacken guy ropes if required.

NB: You MUST do both centre poles simultaneously.

5. With entrances closed: Re-tension the guy ropes to secure the tent.
The guy ropes should be in line with the roof seams – reposition pegs if required.
6. Peg down the outside of the tent and ensure the mud flap is tucked in to the tent.

Contents:

1 x tent canvas

2 x steel centre poles \varnothing 28 x 1 mm

12 x side poles \varnothing 19 x 1 mm

1 x ridge pole, telescopic, \varnothing 25/22 x 1 mm

guy ropes, pegs

Please always ensure that your tent is safely pegged to the ground

Guy ropes and pegs should be marked/tagged to avoid tripping over in the dark
